# LIKE TODAY'S WORKFORCE, uniFLOW ONLINE WORKS IN THE OFFICE AND AT HOME

uniFLOW Online allows employees to seamlessly print and scan documents, whether they're working from the corporate office, their home office, or a combination of both. The similar user experience and ease of operation of Canon enterprise multifunction printers and compatible desktop or multifunction printers at home makes for a smooth transition between the two work environments. Organizations and administrators can benefit from enhanced security, detailed reporting, and potential cost savings with comprehensive tracking and management. The end result—a print and scan infrastructure that's flexible, has more security controls, and is built for the future of work.

PRINTING

uniFLOW Online supports printing to large multifunction devices in the office as well as smaller, all-in-one multifunction and single-function printers in the home. Plus, with Print via Cloud, users can print easily and quickly regardless of the network they're on.

Print Via Cloud

User Submits Job from ANYWHERE

Encrypted print job travels to the cloud

After user authenticates, encrypted print job travels to the device
Job Prints

TRACKING/REPORTING

Employees working from home can print directly from their device—and with immediate job release—while still tracking costs. If the device is in the same room as the employee and it's continuously monitored, secure printing is often not necessary. If, on the other hand, the device is regularly shared with family members, secure printing for company documents can still be implemented. Documents can be released following authentication with a PIN code.

Consolidated Reporting, No Matter Where the Device is Located

CLOUD

An Internet connection is all that's needed for employees to link their supported device to uniFLOW Online. This gives them the dual advantage of staying connected while having the flexibility to work from either their office or home.

And employees are always up to date with this cloud service. uniFLOW Online typically issues three releases a year that offer new or enhanced features. So regardless of location, when uniFLOW Online is updated, so are all users!
Easy Setup at Home

SCANNING

Scan workflows follow employees from device to device, whether at work or at home. A similar user interface and scan profiles are available at the home office as well as the workplace. With uniFLOW Online's innovative cloud technology, conversion to Word or searchable PDF and file compression are also available before the document is sent to its intended destination.

## Access Many Cloud Scanning Destinations*

- Scan to Desktop (local document folders)
- Scan to Local Network Folder (local shared folders)
- Box
- Dropbox
- Evernote®
- Exchange® Online
- Google Drive™
- Microsoft® OneDrive®
- Microsoft OneDrive for Business
- Microsoft SharePoint Online
- SAP Concur®
- Therefore™ Online
- Microsoft Teams

* In addition to the destinations shown above, imageRUNNER ADVANCE DX and imageFORCE devices with uniFLOW Online also support scanning to Microsoft SharePoint Online, Microsoft Exchange, and Therefore Online.

uniFLOW ONE

As businesses shape their cloud strategy and adjust to the increase of mix-and-match work locations, they need solutions that give them flexibility and cost advantages. uniFLOW, in hybrid mode, allows central management of both the server and cloud locations. It enables the flexibility to take advantage of on-demand cloud resources while simultaneously satisfying sophisticated security requirements and business process workflows.
